Senior DevOps Engineer – Application Reliability

Your tasks

Do you thrive on solving complex technical challenges and keeping critical platforms running at their best? We are looking for a Senior DevOps Engineer who will take ownership of a business-critical self-hosted web application platform. In this role, you will drive reliability, automation, and continuous improvement across cloud and on-premises environments while working with modern technologies such as Kubernetes, AWS, Jenkins, and GitHub.

You'll be responsible for ...

• Operate, maintain, and continuously improve a complex self-hosted web application platform

• Manage and enhance infrastructure across on premises and cloud environments.

• Own and optimize CI/CD pipelines, development toolchains, and deployment automation.

• Administer and improve technologies including Kubernetes, AWS, Jenkins, GitHub, and related DevOps tooling.

• Investigate and diagnose incidents across application modules, data flows, interfaces, configurations, and code.

• Perform root-cause analysis and differentiate between user-related issues, configuration problems, data defects, interface failures, and software bugs.

• Independently resolve recurring incidents and implement sustainable fixes using Pro-Code, Low Code, and No-Code approaches.

• Improve platform observability, monitoring, automation, reliability, and operational transparency.

• Identify technical debt, quality risks, and architectural improvements while contributing to refactoring and maintainability initiatives.

• Create and maintain technical documentation, knowledge articles, and operational best practices.

Your profile

• Degree in Computer Science, Information Technology, or a related field.

• Proven experience in DevOps Engineering, Software Development, IT Operations, or a similar role.
