

System Engineer (Radar)

Descrição da função

For the customer applications of our ADAS ECUs we are looking for a **System Engineer in our location in Budapest**. As System Engineer you are responsible to specify and design ADAS products. You are responsible for the product definition during quote phase, the product specification, and the product maturity during product lifecycle. The System Engineer interfaces with multiple internal and external stakeholders to understand the various levels of requirements, the viable technologies and anticipated development.

- Concept definition, specification and design of radar sensor related to all affected disciplines (e.g.: radar technology, hardware, software, production, vehicle integration and test)
- Definition of the system architecture including allocation of functions to physical components for the project and considering technical safety and security concepts.
- Definition of the system requirements by considering the internal and customer requirements
- Ensuring the traceability of the customer requirements according to the ADAS processes
- Responsibility for system technical risk analysis (System-FMEA, DRBFM, FTA)
- Ensuring a proper technical product documentation and perform product presentations at customer
- Responsibility for product definition and technical documentation during acquisition phase.
