System Test Engineer Intern (IDX: 2023-00148)

Your tasks
Joining of a multinational team of test engineers, responsible for functional testing of connectivity/telematics product.

Work Scope:
1. To develop and perform manual/automated testing of telematics product to validate against our OEM requirements.
2. Contributing to automated test development by learning and applying smart automation techniques.
3. To be involved in system requirement analysis, system test design, execution, and test result and report generation.
4. Assisting in analyzing and defect tracking to ensure that the products are released successfully.
5. To be involved in continuous improvement in the system testing process and methods.

Learning Outcome:
1. To experience the full Embedded Software Development Life Cycle in specific to system testing.
2. To be exposed to a wide variety of new technologies (e.g., test automation, AI, ethernet testing, stability test).

Your profile
• Has interest in system testing.
• Basic scripting skills (e.g. Python).
