

Head of Product and Process Industrialization / Application & Manufacturing Engineering

Ihre Aufgaben

Product and Process Industrialization:

- manage and coordinate the product and process industrialization function of the plant/operations unit
- translate business/project/product specific requirements into tangible impacts (e.g. invest, capacity, capability) and assess plant readiness
- contribute to strategic and operative planning of the plant (e.g. with respect to investments, capacity and headcount planning)
- ensure the achievement of product and process industrialization targets according to internal and external customer expectations
- plan and implement investments for project/product specific tooling and devices (e.g. molds, mandrels, jigs, gauges) according to standards
- initiate and implement continuous improvement activities by applying CBS methods and training measures
- interface to segment, BU or BA functions in order to gather local product and process industrialization requirements and demands and other feedback
- participate in and/or steer global or local product and process industrialization related and cross-functional projects

Application Engineering:

- Development of new product and design variants and combination of existing products to meet customer requirements for metal rubber parts and and air spring systems
- Design of required product characteristics according to technical specification under consideration of commercial aspects and supplier choice
- Technical support (internal and external) over product life cycle of Commercial and Railway vehicle
- Definition, evaluation and interpretation of test results for product development
- Support with customer claims in cooperation with quality management / quality assurance
- Acquisition of new development projects and customer relationship management with technical counterpart.

Manufacturing Engineering:

- support the manufacturing engineering function of the plant/operations unit
- contribute to strategic and operative planning of the plant/operations unit (e.g. with respect to investments, capacity and headcount planning)
- ensure the achievement of manufacturing engineering targets according to internal and external customer expectations
- initiate and control investments for production equipment (e.g. production machines, assembly equipment, automation technology, etc.) and manufacturing engineering equipment (e.g. for software tools, equipment for machine installation/maintenance)
