

Digital Solution Development & Testing Engineer

Descrição da função

At Continental Tires we are aiming to become a leader in the digitalization of tire fleet solutions. We are creating innovative digital products for our fleet customers to take on big problems to help service partners, fleet managers and drivers with our solutions around the world.

Our IT R&D organization constantly establishes new technology to help R&D Tires design and develop the best-performing and most sustainable tires on the market. Naturally, we work in close partnership with the Tire Research and Development team to ensure the solutions we build help the Tire team be the most efficient and effective it can be.

If you love to learn, grow and be on the forefront of creating modern technology tools, Continental is the perfect match for you.

As a Digital Solution Development & Testing Engineer, you will deal with all topics around testing, from setup of test requirements, develop test plans until carry out of tests, create reports, and finally take responsibility in the product release process. Additionally, you will develop more creative and innovative solutions around the tire, like innovative sensors and electrical systems, integrated into vehicle or stationary networks.

Your main responsibilities will be:

- Collection of technical requirements of products / system;
- Generation of test plans to validate the specification;
- Ensure carry out of test plans and create test reports
- Ensure close communication with technical stakeholders;
- Development of technical/electronic/software-based solutions, including concept generation, evaluation of solution proposals, steering of realization;
- Design of innovative approaches with the target to get, to use and/or to transmit information about the tire;
- Usage of vehicle and/or stationary networks.

Requisitos

- University degree in Electronics, Electrical Engineering, or related studies;
- Practical experience in electronics (e.g., sensors, embedded controller);
- Advanced programming knowledge in Python, C etc. (e.g., in realization of applications based on embedded controllers);
- Enthusiastic to deal with latest technology trends and to transfer these to tire related topics;
- System & component know-how;
- Knowledge in test concepts and specification;
