

Quality Technician II (7am-3pm)

Your tasks

1. Organize the activities of the day/week according to the internal or external customer demand or even established by the assigned Lead of the lab.
2. Perform the activity following specific SOP's, specifications, customer requirements or Inspection Instructions. Depending on the risk associated in case of non-OK result, escalation should be done immediately through using effective communication and documentation, according to the SOP associated. Develop inspection reports for measurements performed.
3. In the event of damage, malfunction, lost or needing replacement of any instrument with or equipment, it must be reported and removed from use (as applicable).
4. Perform MSA Studies as planned by the Quality Engineer or by the assigned Lead of the Lab, addressing the results to them, as well as reporting suggestions for improvements.
5. Maintain organized/detailed records, benches and instruments during the activities being performed. Update work instructions or inspection instructions as required.
6. Identify improvement opportunities for products and processes (not limited to the Quality Dept.) suggesting Preventative Action Reports (PARs) or Corrective Action Reports (CARs).
7. Support Customer, Internal, and External IATF 16949 audit program(s) as required.
8. Perform PPAP based on the customer requirements.
