(Junior) AI Software Engineer

Your tasks

At Continental Tires we want to make analytical excellence an integral part of all processes that have impact on leveraging business value. In cooperation with our domain experts from the Business units we identify business problems which can be supported and solved by using methods from Advanced Analytics and Artificial Intelligence. Only with data insights we will be able to adapt to changes and mitigate risks in a constantly changing economy.

As **AI Software Engineer** you will work in a global team of experts delivering Data Science products and know-how to diverse areas all over the tire business.

If you'd love to join a global team that works on the latest technologies and creates value-added solutions for customers, Continental is the perfect match for you.

Your <u>main responsibilities</u> will be:

- Be integral part of projects in areas like Sales, Marketing or Manufacturing;
- Design pipelines by creating and connecting databases, APIs and data warehouses to our AI solutions;
- Collaborate with the data science team to design and implement front-end and back-end systems that effectively utilize their AI models;
- Understand the Continental Tires data landscape with its diverse applications and architectures;
- Be a partner in connecting the necessary experts from business and IT to solve problems;
- Get involved into different tasks at once and involve yourself with our team to get the support you need;
- Support in shaping the processes and organization to leverage the business value Data Science can bring to our enterprise.

Your profile

- Academic degree in Computer Science or similar studies;
- Minimum 1 year of IT or industry working experience;
- Good knowledge of object oriented programming languages like Python or Java;
- Experience with data extraction from diverse sources like common data bases, streaming, APIs or SAP systems;
- Knowledge of Machine Learning, Artificial Intelligence and Statistics - is a plus;
- Experience with Cloud providers (AWS, Azure or GCP) - is a plus;
- Experience with Agile methodologies;
- Reliable team player with structured self-organized workstyle;
- Good knowledge of data intensive IT architectures;
