

Software Engineer (Visualization Functions)

Feladatok

We develop a camera-based surround view system as a driver assistance system. Four fisheye cameras provide video streams which are stitched together and reprojected to simulate a 3D environment. The created environment is used to support parking maneuvers and low speed visualisations in real time. You contribute as visualization developer to a highly motivated team with your ideas and innovations.

Your Tasks

- Participate in project teams for development and application of surround view systems
- Development of visualization features with C++
- Development of software and tools for configuration and calibration
- Porting and optimizing of existing computer graphics functions and features
- Integration and application of computer graphics features
- Technical alignment with project team and customers
- Working in distributed agile development teams with state-of-the-art tools and development environments
- Contributing with own ideas to enhance the product.

Profilja

- University Degree or PhD in related field (e.g. computer science, software engineering) or a comparable qualification
- At least 4 years of specific experience in the field of ADAS systems or autonomous robots
- Advanced knowledge and practical experience in C++ and GTests
- Knowledge in computer graphics with OpenGL is an advantage
- Experience with image processing and parallel computing (OpenCL/OpenCV/CUDA) of advantage
- Solid background in camera systems and fisheye cameras
- Practical experiences in scalable architecture
- Experience and passion for agile working methods like Scrum or Kanban are beneficial
- Experience in embedded SW development (V Model) and related tools
- Very good knowledge of English, both written and spoken.
