

## (Senior) Process Analytics Specialist (m/f/diverse) - REF77625F

### Your tasks

We are seeking a highly skilled Process Analytics Specialist with experience in data science to join our Manufacturing Analytics team. In this role, you will leverage your strong background in data science, machine learning and statistical analysis as well as your knowledge about the production process to provide strategic insights, drive data-driven decisions and optimize our manufacturing processes. You work up and present results to stakeholders, taking into account their different backgrounds and expertise.

### Key responsibilities:

- Identify analytical use cases and valuable data sources to optimize manufacturing processes and product quality
- Analyse complex manufacturing data to identify trends, patterns, and opportunities for process improvement
- Develop, implement and maintain predictive models and machine learning algorithms to optimize production processes
- Develop and support implementation of algorithms running on cloud (model deployment)
- Collaborate with cross-functional teams to build up business understanding and develop data-driven solutions
- Conduct review loops, interpret results and KPIs and identify improvement measures together with manufacturing experts
- Document and present results taking into account the different knowledge of stakeholders
- Lead projects for data science or projects with analytical scope
- Provide input and assistance for projects related to data analytics and data science
- Analyse data structures and define standards and improvement measures for data quality
- Support and coordinate database set up for manufacturing related processes
- Prepare and build up data pipelines together with data engineers from IT
- Define, support and create data aggregation process (ETL) to fulfil business requirements
- Mentor and guide junior data scientists and analysts
- Create training concepts and train manufacturing colleagues for data related and analytical topics

### Your profile

- University degree in an analytical field: Data Science, applied mathematics, Statistics or a related field
- Several years of professional experience in the area of Data Science or a data driven function
- Proficiency in programming languages such as Python or R

Job ID
