ACU Software Developer / Integrator in SAM PSS OSS Korea

Vaše náplň práce

Software Developer / Integrator in Safety and Motion, Safety and Sensorics, Airbag Control Units Korea

Mission:

The Software Developer designs, implements, develops source code and tests the modules within a software project.

The Software Integrator takes care of the integration of the software components and the related integration tests (specification and conduct). This also includes the build process according to the integration approach as defined in the Software Test Plan and the Software Integration Test Specification.

Tasks and Responsibilities:

- Detailed design and development of specific software components in accordance to the applicable development process
- Specification of the integration approach (steps and content) for software components
- Provide timely feedback on progress, success or failure of the software integration
- Measure and communicate resource consumption after integration
- Perform the software integration steps and create baselines
- Contribute to the design and execution of software integration tests
- Deliver the committed work package within the planned time, effort and quality
- Collaborate with the other engineering disciplines locally but also across multiple development locations to achieve the goals of the team
- Contribute to development process and methods improvement initiatives
