

## Data / ML Engineer

### Feladatok

Continental's digital capabilities are growing every day. Our Information Technology Research and Development team is on the cutting edge of all things digitalization - and we want you to join us!

Are you a Data Enthusiast who thrives on mastering technical challenges and pushing the boundaries of what's possible? At Continental RnD IT, we're a team of dedicated professionals who are deeply passionate about our work. We believe in creating innovative solutions while maintaining a collaborative and enjoyable work environment.

Our IT R&D organization constantly establishes new technology to help R&D Tires design and develop the best-performing and most sustainable tires on the market. Naturally, we work in close partnership with the Tire Research and Development team to ensure the solutions we build help the Tire team be the most efficient and effective it can be.

If you love to learn, grow and be on the forefront of creating modern technology tools, Continental is the perfect match for you.

You will be part of a versatile team of data and analytics specialists that provides IT solutions to ensure and accelerate Continental's internal digitalization. Contribute to our goals for reliable data solutions, based on excellent data integrity, availability, and quality through your support with operating and maintaining our modern, cloud-based data analytics landscape.

In this exciting job, you will work on the following tasks:

- Design, develop, and maintain scalable data processing flows
- Support the development of new predictive models, establish automated AI/ML pipelines, and streamline the model lifecycle from training and validation to deployment
- Industrialize, further develop, and operate data and machine learning solutions to integrate them into Tire R&D processes and services
- Collaborate closely with Tire R&D experts and data scientists to understand business challenges and translate them into technical requirements

### Your Profile

- Academic degree in computer science, engineering, data science, or related studies
- Advanced knowledge of data warehouses, data-driven use cases, and applications
- Proficiency in Python and SQL, with advanced skills in database technologies
- Familiarity with relevant machine learning libraries (e.g., TensorFlow, PyTorch, scikit-learn)
- Hands-on experience with ETL processes or tools (e.g., Matillion,
