

Automation Platform Engineer

Jūsų užduotys

- The RPA Developer designs, builds, tests, and maintains automation solutions using Robotic Process Automation (RPA) technologies such as UiPath. Working closely with business stakeholders and IT experts, the role enables the automation of repetitive, rule-based tasks to enhance operational efficiency, reduce errors, and support scalable digital transformation.
- Develops, maintains, and optimizes RPA solutions that serve business units.
- Supports and enhances automations that contribute to enterprise-wide productivity, scalability, and compliance.
- Works in a cross-functional team of developers, solution architects, and platform operators within the Automation Team.

Reikalavimai

- Automation Solution Delivery: Analyze business processes, define and document automation solution designs, and implement stable and scalable automation workflows using RPA tools like UiPath.
- Change & Release Management: Initiate and manage changes through defined service management processes (e.g., documentation, versioning, deployments). Collaborate with QA to ensure clean handovers and releases.
- Test & Quality Assurance: Create and execute test scenarios for new or changed automation solutions. Identify and resolve defects. Ensure solutions meet defined quality, performance, and compliance benchmarks.
- Documentation & Compliance: Ensure all developed solutions are documented and versioned in line with Automation Governance standards. Maintain audit-readiness and transparency in change history.
- Continuous Improvement: Continuously improve automation solutions based on feedback from operations, consultants, or users. Identify opportunities for optimization and increased business value.
- Collaboration & Enablement: Cooperate closely with automation architects, consultants, operators, and other stakeholders to ensure robust and maintainable solutions. Actively contribute to knowledge sharing and internal communities.
