

(Senior) Data Engineer

Tus actividades

Continental's Data and Customer Solutions Competence Center creates a wide range of digital solutions for Continental's customers and internal stakeholders – and we want you to join us!

If you'd love to join an international crowd that works on the latest technologies and creates state-of-the-art solutions, Continental is the perfect match for you.

As a Data Engineer, you will work in a SCRUM team closely with the backend developers, solutions architects and UI/App developers to build and enhance our existing and future digital services within Continental Tires. With this job, you join the global team working on our product ContiConnect, a digital tire monitoring platform for commercial fleets around the world.

Main Responsibilities:

- Closely collaborate with ContiConnect team members based in Germany, Portugal and US to foster the integration of data across several applications;
- Design and establish common data models for data exchange;
- Constantly adapt data models as per the requirements of the connected applications;
- Build ingestion processes for streaming data as well as bulk imports;
- Support ongoing operations for data pipelines as 3rd level support engineer; Follow Scrum/Agile / SAFe methodologies to organize and plan projects;
- Responsible for planning efforts and timelines to business stakeholders;
- Maintaining data streaming specific CI/CD pipeline;
- Leading data engineering development work;
- Collaborate with business stakeholders in data engineering concepts.

Tu perfil

- University degree in Computer Science, IT, or related studies;
- At least 3 years of experience as an internal or external consultant / developer for data warehousing applications;
- Experience supporting and operating a software system;
- Focus on Business Architecture Redesign;
- Affinity for the specific challenges of data integration from heterogenous sources;
- Experience in at least one object-oriented programming language (e.g., Java, Python, C#);
- Knowledge of data modeling in relational databases (preferably PostgreSQL);
- Experience with data modeling in key value stores - e.g., HBase - (is a plus);
