

IT Engineer Customer Infrastructure

Descrição da função

1. Position Summary

The **IT Engineer Customer Infrastructure** serves as the **primary interface between Local IT teams and Central IT Infrastructure**, ensuring alignment, transparency, and the smooth execution of infrastructure related initiatives across all ContiTech locations. The role focuses heavily on **coordinating and participating in infrastructure projects**, driving local readiness, enabling technical execution, and ensuring adherence to global standards. In addition, the position provides expert support in Active Directory, server operations, and infrastructure management tools, with a foundational understanding of network technologies to support cross domain troubleshooting.

Additionally, the IT Engineer Customer Infrastructure is responsible for **regular reporting activities**, including preparation, consolidation, and communication of infrastructure metrics, migration status, compliance indicators, and operational performance, ensuring transparency toward both Local IT and central stakeholders.

2. Key Responsibilities

- Act as a key member of a **global infrastructure team**, collaborating across regions, time zones, and organizational units.
- Serve as the **primary interface** between Local IT teams and Central IT Infrastructure, ensuring alignment, clarity, and efficient information flow.
- Translate central infrastructure strategies, requirements, and technical standards into actionable steps for Local IT.
- Represent Local IT needs, constraints, and risks to central teams, ensuring they are considered in global planning and execution.
- Collect local constraints, risks, and dependencies and communicate them clearly to central teams.
- Support lifecycle management of servers and infrastructure services (updates, patching, decommissioning, compliance).

Project Coordination & Participation

- Coordinate and actively participate in infrastructure related projects, including migrations, tenant separation, server lifecycle activities, and platform transitions.
- Support project planning, readiness checks, execution monitoring, and post implementation validation.
- Ensure Local IT readiness and engagement for all project waves and milestones.
- Provide expert technical input during design, testing, and

implementation phases.

Infrastructure Compliance & Audits

- Execute and support **infrastructure and security audits** across sites, ensuring compliance with global standards and processes.
- Collaborate with Local IT and Central Infrastructure to remediate deviations and implement corrective actions.
- Maintain proper documentation for audit trails, exceptions, and technical validations.

Local IT Enablement & Knowledge Sharing

- Train and guide Local IT resources on infrastructure best practices, operational standards, and required tools.
- Share updates, technical changes, and global guidelines to ensure consistent execution across all sites.
- Promote a culture of operational excellence and continuous improvement.

Independent Work & Self Responsibility

- Operate with a **high degree of autonomy**, taking responsibility for assigned locations, topics, and deliverables.
- Proactively identify issues, drive solutions, and ensure follow through without requiring close supervision.
- Manage time, priorities, and cross team communication independently within a global matrix environment.

Communication and Collaboration

- Communicate technical topics clearly and confidently to both IT and non IT audiences, adapting language and depth based on stakeholder needs.
- Provide structured, concise, and proactive updates to Local IT, Central IT Infrastructure and Project Management
- Escalate risks, issues, and capacity constraints early, ensuring transparency and enabling timely decision making.
- Translate central infrastructure guidelines, standards, and architectural directives into clear operational actions for Local IT teams.
- Drive clarity in complex or ambiguous situations by asking the right questions, validating assumptions, and documenting decisions.

Collaboration

- Work as part of a **global infrastructure team**, collaborating with peers and experts across regions, disciplines, and functional areas.
- Build strong working relationships with Local IT teams worldwide, acting as their trusted contact for infrastructure related topics.
- Collaborate closely with Central IT Infrastructure on design, planning, testing, and implementation of new services or changes.
- Actively contribute to cross team initiatives, workshops, and task forces aimed at improving tools, processes, and operational standards.
- Foster a collaboration culture by sharing knowledge, best practices, and lessons learned across the wider organization.

Independence & Self Responsibility

- Work independently, managing tasks, priorities, and stakeholder interactions with minimal supervision.
- Take full ownership of assigned infrastructure topics, project responsibilities, and communication flows.
- Demonstrate strong self organization, reliability, and accountability in a dynamic and fast moving global environment.

Requisitos

Qualifications & Experience

- **Advanced knowledge of Active Directory**, including OU structure, GPOs, account lifecycle, and permissions.
- **Advanced understanding of Windows Server technologies**, including roles, services, patching, and lifecycle management.
- **Hands on expertise with infrastructure management tools** (Ivanti, QIP, CMI, endpoint management, configuration tools).
- **Basic understanding of network infrastructure**, including VLANs, routing concepts, wireless, firewalls, and site connectivity basics.
- Experience with **Project Management tools** (e.g., JIRA).
- Experience in ITSM tools & processes
- Familiarity with global ContiTech infrastructure and operational standards.
- Experience supporting large scale migrations, separation programs, or infrastructure transformations.
