

Production and CBS Manager

Your tasks

Objective: The role of the position is plan, coordinate and control all production activities in order to meet budget and production targets (e.g. maximize quality and capacity utilization, reduce cost and lead time) and establish Lean philosophy and methodology as well as to meet budget and Lean targets (e.g. eliminate waste, maximize delivery performance, reduce cost and inventories etc.). Furthermore, the Production manager initiates and implements action plans for continuous improvement of all plant processes including plant back-office processes.

Stakeholders/Interfaces: Internal: Plant management, heads of production of other plants (global), all central plant functions, sector and business area functions, Lean specialists, regional and sector Lean coaches

External: Customers, suppliers, auditors, unions, work councils

Key areas of responsibilities:

Production Management & Strategy [20%] - Manage and coordinate the production function of the plant - Contribute to strategic and operative planning of the plant (e.g. with respect to investments, capacity and headcount planning) - Ensure the achievement of production targets according to internal and external customer expectations - Initiate and control investments for production equipment (e.g. production machines, assembly equipment) - Initiate and implement continuous improvement activities by applying CBS methods and training measures

Production Planning, Control & Execution [15%] - Ensure planning of all production processes, equipment and employee resources taking into account customer demand and available capacity - Ensure the fulfillment on the daily and monthly production plan and corrective actions with relevant departments - Contribute to regular production planning and control processes (especially in close cooperation with supply chain function of plant) - Ensure operation of all production and rework processes and equipment according to standards and planning in close cooperation with maintenance - Ensure operation of in-process quality control and final inspection according to standards and planning, improve and follow up regularly on quality and losses with relevant departments - Ensure operation of internal material handling and transportation (internal logistic) for semi-finished goods (raw materials and finished goods are excluded) according to standards and planning - Ensure production data acquisition (e.g. order, machine, process or quality data) according to standards Internal

Lean (business systems) Coordination [20%] - Manage and coordinate all company adapted Lean activities for the plant - Translate plant Lean strategy into action plans and ensure implementation (shared with Plant Manager) - Contribute to strategic and operative planning of the plant

Job ID
REF94504I
