

IT Engineer Infrastructure

Your tasks

Your role includes:

Serve as the primary interface between Local IT teams and Central IT Infrastructure, ensuring alignment, clarity, and efficient information flow, collaborating across regions, time zones, and organizational units.

Translate central infrastructure strategies, requirements, and technical standards into actionable steps for Local IT while representing Local IT needs, constraints, and risks to central teams, ensuring they are considered in global planning and execution.

Support lifecycle management of servers and infrastructure services (updates, patching, decommissioning, compliance).

Coordinate and actively participate in infrastructure related projects, including migrations, tenant separation, server lifecycle activities, and platform transitions. Ensure Local IT readiness and engagement for all project waves and milestones.

Provide technical input during design, testing, and implementation phases of infrastructure related projects

Execute and support infrastructure and security assessments across sites, ensuring compliance with global standards and processes. Collaborate with Local IT and Central Infrastructure to remediate deviations and implement corrective actions.

Maintain proper documentation for audit trails, exceptions, and technical validations.

Service ownership for global Infrastructure services with close plant interaction, e.g. asset management, hardware portfolio, etc

- Promote a culture of operational excellence and continuous improvement. Train and guide Local IT colleagues on infrastructure best practices, operational standards, and required tools.
- Escalate risks, issues, and capacity constraints early, ensuring transparency and enabling timely decision making.
- Translate central infrastructure guidelines, standards, and architectural directives into clear operational actions for Local IT teams.
- Drive clarity in complex or ambiguous situations by asking the right questions, validating assumptions, and documenting decisions.
- Build strong working relationships with Local IT teams worldwide, acting as their trusted contact for infrastructure related topics.
- Collaborate closely with Central IT Infrastructure on design, planning, testing, and implementation of new services or changes.
- Actively contribute to cross team initiatives, workshops, and task forces aimed at improving tools, processes, and operational standards.
- Foster a collaboration culture by sharing knowledge, best practices, and lessons learned across the wider organization.

Your profile

- Bachelor's degree in Computer Science, Information Systems, or Related equivalent work experience.
- Excellent english skills applied in business context, additional language is a plus
