

R&D Process and Regulations Analyst

Your tasks

As an R&D Process and Regulations Analyst, you will be responsible for implementing and maintaining local/regional R&D processes, documentation, and training. You will serve as a quality coach and support the execution of the global R&D strategy through the following key responsibilities:

Develop and maintain the regional R&D strategy in alignment with the R&D management team, ensuring implementation of supporting tools, methods, and regulatory compliance

Maintain and adapt the "Development process" as the core process for the business unit in the region

Execute a sound master data strategy, ensuring global standardisation, adaptability, and regulatory compliance

Safeguard compliance with chemical, legal, and safety regulations whilst maintaining alignment with local authorities

Serve as the regional quality coach, implementing and training standardized quality tools (e.g. FMEA) and maintaining quality awareness standards

Set up and maintain the R&D work infrastructure in the region, ensuring uniform understanding and proper administration of organizational policies

Act as the regional regulatory representative and expert network contact for the business unit

Support the chemical strategy development through cross-functional collaboration and maintain contact with development, sales, and business development teams to identify opportunities for new products and solutions
