Principal/Specialist Tire & Vehicle NVH (m/f/d) - REF97705I

Náplň práce

The role is integrated in the Continental Tire R&D (Hanover, Germany). The Principal engineer employs his industry or academic experience in the field of tire or vehicle chassis NVH technology to establish themselves as the NVH reference within the company, offering technical consultation in the field of vehicle comfort, vehicle interior noise, and tire/vehicle exterior noise (R117, R51). They assume responsibility for integration of prediction and testing methods within product lifecycle and design product gates to guarantee product target fulfillment and noise emissions regulatory compliance. They maintain and expand their already existing network within the tire/automotive industry NVH community and represent Continental in expert-level business-relevant B2B interactions.

Key tasks:

- Identifies industry trends and cutting-edge technologies in the field of vehicle comfort, vehicle interior noise, and tire/vehicle exterior noise and translates them to concrete technical initiatives and strategic directions for Continental
- Initiates and coordinates the development of numerical prediction and evaluation technologies in the field of NVH
- Designs and implements product development and product release processes that guarantee customer and regulatory NVH target fulfillment
- Offers internal NVH consultation and training for product development colleagues in the field of NVH, promoting a pragmatic and evidence-based approach to problem solving

Profil kandidáta

- Academic degree in the field of Engineering or physical/Natural Sciences or similar
- Multi-year experience in the field of NVH within the tire or automotive industry or academic career in this field (e.g. PhD combined with industry linked research career)
- Deep knowledge and understanding of tire and vehicle chassis mechanisms related to comfort, interior noise and exterior pass-by noise
- Experience with leading complex R&D projects and establishing technical processes
- Practical experience with CAE/FEM method development & application, ideally in the field of tires or vehicle chassis NVH/structural dynamics
- Experience with industry-standard tire modeling approaches for comfort and structure-borne noise (such as MF-SWIFT, FTire, and CDTire), covering modeling and simplification principles, parameter identification process, limitations, application scenarios, and vehicle
